

# Give your **LIPS** a reason to **SMILE**

One of the great challenges in plastic surgery has been the search for an exceptional solution to lip enhancement. Temporary solutions typically involve the use of commercially produced fillers which can be unpredictable with respect to how long they last, and require repetitive treatments that are painful, inconvenient, and costly to patients.

Finally, a safe solution to permanent lip enhancement is available. The new Perma Facial Implant is a patented device recently FDA approved as a facial implant. The naturally contoured implant is made of soft, solid silicone that cannot rupture or deflate. The procedure takes less than twenty minutes to perform using local anesthesia. Although permanent, the implant can be easily removed at any time.
